

## CONTINUOUS COST EXAMINATION

We offer our partners continuous availability, control service, and within the framework of this, we constantly monitor the company's IT costs through the IT invoices.

- ▶ The provider invoices are controlled every month. We are checking if the provider invoices are according to the contract, and if there is any outstanding use giving reasons for steps
- ▶ We generate reports/registers of employee costs upon demand
- ▶ As per the corporate rules, we generate the invoices for the costs to be paid by the employees
- ▶ We monitor our partner's contractual liabilities, and warn them in time, if there is any task to be performed, or any opportunity related to a provider contract (e.g. in case of contract expiry the contract is automatically prolonged, if not terminated until a given date)
- ▶ We monitor new services and providers on the market, and if changes are necessary for the interest of the company, we inform the decision makers accordingly
- ▶ We provide our partners continuous availability, and help them in their constant "fight" with the telecommunications providers.

With this service, our partners receive regular attention that provides a cost overview of their entire telecommunications system, and warns them of any events that may need intervention in time.
