

TELEPHONE AND DATA COST OPTIMIZATION

In the life of a company cost cutting, and keeping a realistic cost level are first priority tasks. CostIT Kft. helps its partners in this field of the telecommunications and IT market with its professional competence and experiences.

Telecommunications providers announce new packages and services almost weekly in competition with each other. There are new providers regularly in nearly all areas, and they want to enter the market with advantageous prices, and each tries to acquire one slice of the cake. With the appearance of new technologies, the old tasks can be solved more flexibly, with more advantageous conditions. INTERNET triggers tremendous changes and add same time means almost unlimited possibilities.

Following changes, but mostly their implementation to our own company often causes a problem that the communications colleague is not able to solve. Companies perform comprehensive telecommunications checks next to never.

The consequence of the above is that companies usually

- do not use the suitable services,
- do not use the appropriate service quantities,
- do not use the suitable provider,
- and they do not pay market price for services.

**Provider - independent
expert, helper in
telecommunications**

What does this mean to a company? Money! Much, much money!

This is the waste of much money that was difficult to earn and, that means unnecessary costs! Based on our experiences in case of a company, where the structure of telephone and data transmission is not regularly examined, even 30-40% of invoices may be a waste of money.

In order to avoid unnecessary costs, nothing else is to be done, but have an expert partner examine the communication costs of the company, and perform the necessary modifications!

CostIT Kft.

In order to achieve savings CostIT Kft. examines the telecommunications habits of your company in detail. We audit how your communications systems can be transformed cost effectively

- ▶ Is a given service worth replacing by another service?
- ▶ Is it possible to regroup resources in order to achieve better utilization?
- ▶ Is a larger scale change, modernization necessary, which alone may be a remunerative investment?
- ▶ Is the tariff package of the provider to be changed, or
- ▶ Possibly the provider itself is to be changed, or
- ▶ Is it simply enough to warn the provider to invoice according to the contract (based on our experiences there is a significant extent of unjustified provider over charging in the market).
- ▶ Possibly the unnecessary lines and services are to be terminated.

We have no pre-defined answers to these questions. However, after the audit, we can recommend a modern, and cost efficient model of operation. We can find the suitable provider to our partners with the suitable services, for market price.

**Savings can
even reach
40%**

We audit, and offer the best option!

CostIT Kft. offers to all its existing and future partners - free of charge and commitment - to carry out a preliminary audit of their telecommunications invoices, based on which the expected savings after cost optimization can be estimated.
